Toward an Integrative Explanation of Corporate Financial Performance Aug 09 2020 This volume is a milestone on our journey toward developing a more comprehensive understanding of the underpinnings of corporate financial performance. We are concerned with both the factors that cause the financial performance of some firms to be better than others at a point in time and those factors that influence the trajectory of firm financial performance over time. In addressing these issues, we consider theoretical and empirical work on financial performance, drawn from several literatures, as well as present the results from our own empirical study. The review of the theoretical and empirical work is contemporary; the major portion of data comprising the empirical study was collected in the early 1980s as part of the Columbia Business School project on corporate strategic planning, but some data sequences extend into the mid-1980s and early 1990s. Our goals are to improve understanding of firm financial performance by developing a more integrated framework and to develop a research agenda based on what we have learned. This volume consists of four chapters, 12 appendices that provide detailed technical support and development for various portions of the discussion and an extensive set of references. It interweaves results from published literature in various fields with our original empirical work and develops an integrative approach to the study of firm financial performance.

Portfolio Theory and Management May 18 2021 Portfolio management is an ongoing process of constructing portfolios that balances an investor's objectives with the portfolio manager's expectations about the future. This dynamic process provides the payoff for investors. Portfolio management evaluates individual assets or investments by their contribution to the risk and return of an investor's portfolio rather than in isolation. This is called the portfolio perspective. Thus, by constructing a diversified portfolio, a portfolio manager can reduce risk for a given level of expected return, compared to investing in an individual asset or security. According to modern portfolio theory (MPT), investors who do not follow a portfolio perspective bear risk that is not rewarded with greater expected return. Portfolio diversification works best when financial markets are operating normally compared to periods of market turmoil such as the 2007-2008 financial crisis. During periods of turmoil, correlations tend to increase thus reducing the benefits of diversification. Portfolio management today emerges as a dynamic process, which continues to evolve at a rapid pace. The purpose of *Portfolio Theory and Management* is to take readers from the foundations of portfolio management with the contributions of financial pioneers up to the latest trends emerging within the context of

special topics. The book includes discussions of portfolio theory and management both before and after the 2007-2008 financial crisis. This volume provides a critical reflection of what worked and what did not work viewed from the perspective of the recent financial crisis. Further, the book is not restricted to the U.S. market but takes a more global focus by highlighting cross-country differences and practices. This 30-chapter book consists of seven sections. These chapters are: (1) portfolio theory and asset pricing, (2) the investment policy statement and fiduciary duties, (3) asset allocation and portfolio construction, (4) risk management, (5) portfolio execution, monitoring, and rebalancing, (6) evaluating and reporting portfolio performance, and (7) special topics.

Selected Essays in Empirical Asset Pricing Sep 29 2019 Christian Funke aims at developing a better understanding of a central asset pricing issue: the stock price discovery process in capital markets. Using U.S. capital market data, he investigates the importance of mergers and acquisitions (M&A) for stock prices and examines economic links between customer and supplier firms. The empirical investigations document return predictability and show that capital markets are not perfectly efficient.

Portfolio Performance Evaluation Nov 11 2020 This paper provides a review of the methods for measuring portfolio performance and the evidence on the performance of professionally managed investment portfolios. Traditional performance measures, strongly influenced by the Capital Asset Pricing Model of Sharpe (1964), were developed prior to 1990. We discuss some of the properties and important problems associated with these measures. We then review the more recent Conditional Performance Evaluation techniques, designed to allow for expected returns and risks that may vary over time, and thus addressing one major shortcoming of the traditional measures. We also discuss weight-based performance measures and the stochastic discount factor approach. We review the evidence that these newer measures have produced on selectivity and market timing ability for professional managed investment funds. The evidence includes equity style mutual funds, pension funds, asset allocation style funds, fixed income funds and hedge funds.

Performativity of Villainy and Evil in Anglophone Literature and Media Dec 01 2019 *Performativity of Villainy and Evil in Anglophone Literature and Media* studies the performative nature of evil characters, acts and emotions across intersecting genres, disciplines and historical eras. This collection brings together scholars and artists with different institutional standings, cultural backgrounds and (inter)disciplinary interests with the aim of energizing the ongoing discussion of the generic and thematic issues related to the representation of villainy and evil in literature and media. The volume covers medieval literature to contemporary literature and also examines important aspects of evil in literature such as social and political identity, the gothic and systemic evil practices. In addition to literature, the book considers examples of villainy in film, TV and media, revealing that performance, performative control and maneuverability are the common characteristics of villains across the different literary and filmic genres and eras studied in the volume.

Dynamic Strategy and Performance of German Mutual Fund Managers Mar 04 2020 Die Messung des Anlageerfolgs von Fondmanagern ist ein sowohl für Praktiker als auch für Forscher herausforderndes Thema. Das Ziel beider Gruppen ist nachhaltig erfolgreiche Manager, gute Performer, zu identifizieren. Die meisten Performancemaße beruhen auf der Annahme des konstanten Risikos über die Messungsperiode. Das Risiko wird wiederum als das Beta aus dem Capital Asset Pricing Model erfasst. Als Erweiterung solcher Modelle werden zusätzliche Faktoren, wie geschnittene Benchmarks oder Nichtlinearitäten zwischen Risiken und Renditen erfasst usw. Die Dynamik der Wirtschaft und Kapitalmärkten ist für die Zwecke der Performancemessung von Person und Schafft in ein Modell eingeführt. Das Beta aus diesem Modell ist auf die Marktbedingungen bedingt und Fondsrenditen werden somit gegen eine dynamische Benchmark gemessen. Diese Studie berichtet aus einem solchen Modell ergebene Performancemaße (sog. "Conditional Alphas") für 1192 deutsche Aktien- und Rentenmanager. Diese werden auch mit CAPM-basierten Alphas auf Persistenz verglichen. Zusätzlich wird die Fähigkeit des Managers richtig auf die verändernden Marktbedingungen zu reagieren aus der Dynamik des Beta extrahiert. Die Marktentwicklung wird durch vier anerkannte Indikatoren abgebildet (kurzfristiger Zins, Dividendenrendite, Laufzeitspread und Bonitäts spread). Die Ergebnisse beantworten die Nutzung von Modellen mit bedingtem Beta anstelle vom CAPM. Die Existenz einer dynamischen Investmentstrategie wurde anhand der Indikatoren bewiesen. Zum Schluss werden anhand der Erfahrungen aus dieser Studie konkrete Empfehlungen für die Erforschung von Performance anhand ähnlicher Modelle gegeben.

Performance Studies in Canada Apr 16 2021 Since its inception as an institutionalized discipline in the United States during the 1980s, performance studies has focused on the interdisciplinary analysis of a broad spectrum of cultural behaviours including theatre, dance, folklore, popular entertainments, performance art, protests, cultural rituals, and the performance of self in everyday life. *Performance Studies in Canada* brings together a diverse group of scholars to explore the national emergence of performance studies as a field in Canada. To date, no systematic attempts have been made to consider how this methodology is being taught, applied, and rethought in Canadian contexts, and Canadian performance studies scholarship remains largely unacknowledged within international discussions about the discipline. This collection fills this gap by identifying multiple origins of performance studies scholarship in the country and highlighting significant works of performance theory and history that are rooted in Canadian culture. Essays illustrate how specific institutional conditions and cultural investments - Indigenous, francophone, multicultural, and more - produce alternative articulations of "performance" and reveal national identity as a performative construct. A state-of-the-art work on the state of the field, *Performance Studies in Canada* foregrounds national and global performance knowledge to invigorate the discipline around the world.

Asset Allocation Considerations for Pension Insurance Funds Sep 02 2022 The central research objective of the dissertation is to assess the suitability of Social Responsible Investments (SRIs) as well as alternative investments for the strategic asset allocation of German Pension Insurance Funds (Pensionskassen). Using a Vector Error Correction model, we estimate the data generating process of the underlying input variables. A bootstrap simulation allows generating future return paths of the underlying portfolios. These return distributions will subsequently be used as input for different asset allocation strategies. The empirical results of our research study offer valuable conclusions: (1) SRI-structured portfolios consistently perform better than conventional portfolios, (2) including alternative investments has a beneficial effect on the risk-return distribution and (3) derivative overlay structures mitigate downside risk exposure without impacting average fund performance. In terms of alternative allocation models, (1) high-equity portfolios lead to an increase in return volatility without sufficiently compensating investors with higher returns, (2) hedging against price increases by engineering a portfolio with inflation-suitable assets yields mixed results, (3) a portfolio composition that combines derivative overlay strategies for both equities and corporate bonds and uses SRI-screened assets as underlying generates the best results.

Asset Assessments and Community Social Work Practice Feb 01 2020 Needs assessments identify the needs for services, answering questions about who needs these services and in what priority. Asset assessments focus on existing resources; combining both needs and asset assessments helps find the gaps in these services and is useful to organizations and communities. Asset assessments differ dramatically from their needs assessments counterparts along a variety of key dimensions. Asset assessments generally attempt to: (1) focus on capacities rather than problems/needs; (2) actively seek community participation and develop collaborative partnerships; (3) seek to tap and enhance community competencies; (4) seek to equalize power between residents and professionals; (5) be proactive rather than reactive to problems; and (6) stress community contributions and ownership of the process and are thus empowerment-driven.

The Impact of Investments in Market-based Assets on Firm Performance Aug 21 2021 Market-based assets, such as brands or customer relationships, can be thought of as intangibles that arise through the commingling of the firm with its environment. As such, they are constructs that bridge the conceptual gap between managerial actions and firms' financial performance. This dissertation conducts three

studies that advance the understanding of investments in market-based assets conceptually, empirically, and methodologically: First, it rigorously examines prior research in the marketing-finance interface and synthesizes the findings in a conceptual overview of the field. Second, it examines investments into different drivers of customer-based firm value and relates them to different aspects of firm performance. Third, it develops a novel method to estimate investments in market-based assets for firms with undisclosed accounting information through textual analysis of legal statements.

Assessing Performance of Banks in India Fifty Years After Nationalization Jan 02 2020 This book assesses the performance of banks in India over the past several decades, and discusses their current status after fifty years of nationalization. The performance of different categories of banks is evaluated by employing both the traditional ratio analysis and more sophisticated efficiency techniques. The book also explores the market conditions under which Indian banks operate. Going beyond a formal banking study, the book also investigates the causes of the widespread presence of informal credit in parallel to its formal banking counterpart. This approach makes it more comprehensive, unique and closer to the real world. After 50 years of nationalization, India's banking sector is at a crossroads, given the huge and unabated non-performing assets and talks of consolidation. This book, encompassing both the formal and the predominantly 'trust-based' informal credit system, provides essential insights for bankers and policymakers, which will be invaluable in their endeavours to implement meaningful changes. It may also spark new research in the fields of banking performance and efficiency analysis. Lastly, the book not only has significant implications for students of economics, banking, finance and management, but also offers an important resource to support training courses for banking personnel in India.

Asset Management Sep 21 2021 Stocks and bonds? Real estate? Hedge funds? Private equity? If you think those are the things to focus on in building an investment portfolio, Andrew Ang has accumulated a body of research that will prove otherwise. In this book, Ang upends the conventional wisdom about asset allocation by showing that what matters aren't asset class labels but the bundles of overlapping risks they represent.

The Use of Risk Budgets in Portfolio Optimization Sep 09 2020 Risk budgeting models set risk diversification as objective in portfolio allocation and are mainly promoted from the asset management industry. Albina Unger examines the portfolios based on different risk measures in several aspects from the academic perspective (Utility, Performance, Risk, Different Market Phases, Robustness, and Factor Exposures) to investigate the use of these models for asset allocation. Beside the risk budgeting models, alternatives of risk-based investment styles are also presented and examined. The results show that equalizing the risk across the assets does not prevent losses, especially in crisis periods and the performance can mainly be explained by exposures to known asset pricing factors. Thus, the advantages of these approaches compared to known minimum risk portfolios are doubtful.

Alternative Ideas in Real Estate Investment Jan 14 2021 Arthur L. Schwartz, Jr. and Steven D. Kapplin The focus of this volume of the ARES Monograph Series is new ideas in real estate investment. Within this volume, empirical studies, literature reviews, and tutorials examine a broad range of important investment issues. Many new and innovative ideas are presented. This volume should be a rich source of real estate investment ideas for many years to come. Kapplin and Schwartz examine the returns of two types of REITs, as well as that of Master Limited Partnerships (MLP), over the 1987-1989 time period. Their sample consisted of 54 real estate securities; they conclude that these entities did not provide an effective inflation hedge. MLP returns exceeded that of the overall stock market, but the two REIT types did not provide rates-of-return in excess of the marked. An extensive review of the commercial real estate return literature is presented by Fletcher. He focuses upon studies that utilize commingled real estate fund (CREF) data. His detailed overview of the subject provides a much needed

synthesis of the current literature. Roulac presents an extensive discussion of the differences in the perspectives of individual versus institutional investors. In his essay, he considers such factors as scale, diversification, and related issues. Additionally, he examines a wide range of literature from within academia, 1 INTRODUCTION 2 as well as the opinions of various real estate gurus. He concludes that behavioral factors override economic considerations.

Theory for Theatre Studies: Economics Apr 28 2022 How do the use of economic categories (such as capital, commodification, financialisation, labour, property, value, money, production, and consumption) help us understand the operations of theatre, and the works it creates, in new ways? *Theory for Theatre Studies: Economics* explores the relationship between theatre and economics. It considers key economic problems as they arise in the theatre, and how theatre offers a distinctive lens through which to explore theories and concepts that have concerned economics and political economy since the early twentieth century. Through an analysis of international case studies drawn from contemporary performance, this book also explores how we might open up different ways of thinking about economics in and outside the theatre. The case studies examine how a range of significant economic concerns have been explored in a wide variety of plays and performances in just the last decade alone: corporate greed (Lucy Prebble's *Enron*); tax havens (Caroline Horton's *Islands*); outsourcing (Rimini Protokoll's *Call Cutta in a Box*); public debt (Lin-Manuel Miranda's *Hamilton*); economic inequality (Camden People's Theatre's *Whose London is It Anyway?* season); and money (Shunt's *Money*, and Kaleider's *The Money*). Part of the *Theory for Theatre Studies* series which introduces core theoretical concepts that underpin the discipline, *Economics* provides a balance of essential background information and original thinking, and is grounded in case studies to illuminate and equip readers. Volumes follow a consistent three-part structure: an overview of how the term has been understood within the discipline; current trends illustrated by substantive case studies; and emergent trends and interdisciplinary connections. Volumes are supported by further online resources including illustrative material, questions and exercises.

Portfolio Theory and Performance Analysis Nov 23 2021 For many years asset management was considered to be a marginal activity, but today, it is central to the development of financial industry throughout the world. Asset management's transition from an "art and craft" to an industry has inevitably called integrated business models into question, favouring specialisation strategies based on cost optimisation and learning curve objectives. This book connects each of these major categories of techniques and practices to the unifying and seminal conceptual developments of modern portfolio theory. In these bear market times, performance evaluation of portfolio managers is of central focus. This book will be one of very few on the market and is by a respected member of the profession. Allows the professionals, whether managers or investors, to take a step back and clearly separate true innovations from mere improvements to well-known, existing techniques. Puts into context the importance of innovations with regard to the fundamental portfolio management questions, which are the evolution of the investment management process, risk analysis and performance measurement. Takes the explicit or implicit assumptions contained in the promoted tools into account and, by so doing, evaluate the inherent interpretative or practical limits.
